Input Groups

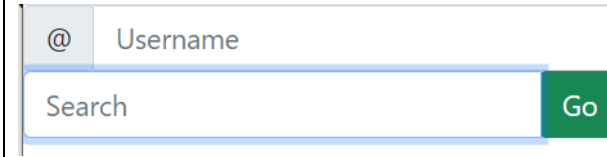

Bir input kontrolünün başına ya da sonuna bir icon ya da bir text eklemek istediğimizde kullanıyoruz.

Eklemek istediğimiz eleman ile input kontrolünü **form-group** içine almalıyız.

Eğer eklemek istediğimiz nesneyi input kontrolünün başına ekliyorsak **input-group-prepend** sonuna ekliyorsak **input-group-append** sınıflarını kullanmalıyız.

input-group' a vereceğimiz **input-group-sm** ve **input-group-lg** sınıfları ile büyüklük ayarlaması yapabiliriz.

```
<div class="input-group">
  <div class="input-group-prepend">
    <span class="input-group-text">@</span>
  </div>
  <input type="text" class="form-control"
placeholder="Username">
</div>
<div class="input-group">
  <input type="text" class="form-control"
placeholder="Search">
  <div class="input-group-append">
    <button class="btn btn-success"
type="submit">Go</button>
  </div>
</div>
```

The screenshot shows a web form with two input fields. The first field has a placeholder text 'Username' and a '@' icon to its left. The second field has a placeholder text 'Search' and a green 'Go' button to its right.

Cards

En basitiyle bir kart oluşturmak için **card** sınıfına sahip bir div içine **card-body** sınıfına sahip bir başka div ve içerik eklemeliyiz.

Bir kart, **card-header**, **card-body** ve **card-footer** kısımlarından oluştur ve istediğimiz bölümleri kullanabiliriz.

bg-* sınıflarını kullanarak card' lara renk verebiliriz.

card-body içerisinde kullanabileceğimiz bazı bölümler vardır bunlar; **card-title**, **card-text**, **card-link** sınıflarıdır.

Kart içine bir resim ekleyebiliriz. Resim üste eklenecekse **card-img-top** alta eklenecekse **card-img-bottom** sınıfları kullanılıyor.

```
<div class="card">
  <div class="card-header">Header</div>
  <div class="card-body">Content</div>
  <div class="card-footer">Footer</div>
</div>
<hr/>
<div class="card">
  
  <div class="card-body">
    <h4 class="card-title">Card title</h4>
    <p class="card-text">Some example text.
Some example text.</p>
    <a href="#" class="card-link">Card link</a>
    <a href="#" class="card-link">Another
link</a>
  </div>
</div>
```

Header

Footer

Some example text. Some example text.

[Card link](#) [Another link](#)

Card Colums

Yüksekliği farklı olan ve yan yana gelen card lar için **card-columns** yapısı kullanılabilir.

Burada önemli olan her bir card' in yüksekliğinin birbirinden farklı olmasıdır.

```
<div class="card-columns">
  <div class="card bg-primary">
    <div class="card-body text-center">
      <p class="card-text">Some text inside the first card</p>
    </div>
  </div>

  <div class="card bg-warning">
    <div class="card-body text-center">
      <p class="card-text">Some text inside the second
card</p>
    </div>
  </div>
```

Some text inside the first card

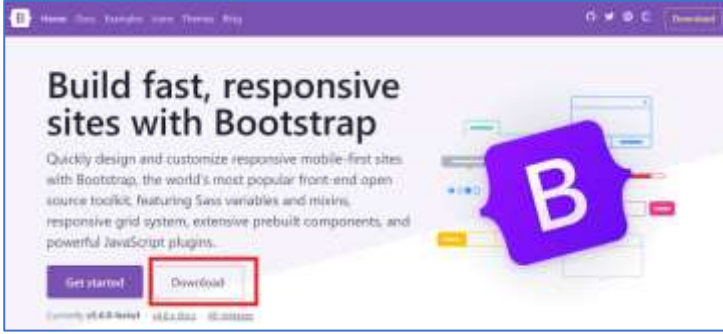

Some text inside the second card

	</div>	
<p>Card Group</p> <p>Card Deck ile aynı görüntüyü elde ederiz ancak her bir elemanın arasında margin olmaz.</p> 	<pre> <div class="card-group"> <div class="card bg-primary"> <div class="card-body text-center"> <p class="card-text">Some text inside the first card</p> </div> </div> <div class="card bg-warning"> <div class="card-body text-center"> <p class="card-text">Some text inside the second card</p> </div> </div> </div> </pre>	

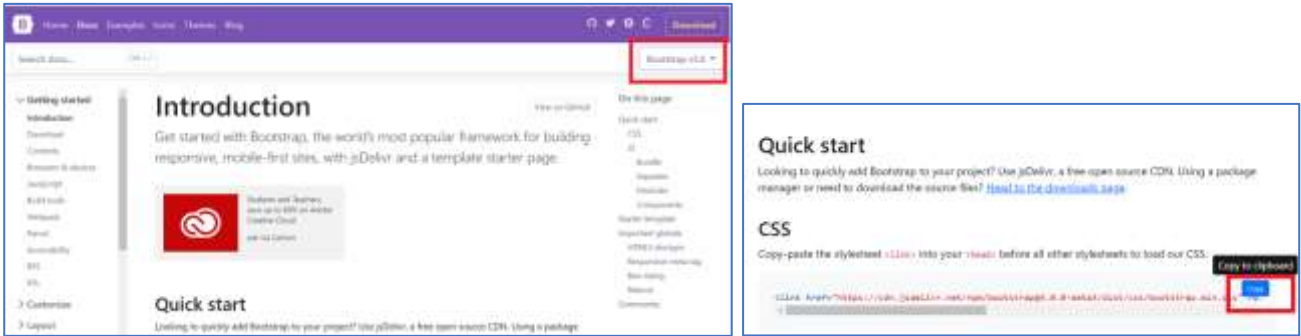

GİRİŞ

Bootstrap CSS ve JS (javascript) hazır şablonlarından oluşan bir kütüphanedir. Hızlı bir şekilde tasarım yapmamızı sağlar. Daha önceden hazırlanmış estetik özellikleri geliştirilmiş hazır şablonlar ile kolayca tasarımlarımızı görsel hale getirebiliriz. Açık kaynak kodludur.

İlk olarak Bootstrap sitesine girelim. (<https://getbootstrap.com/>) Kütüphaneyi kullanabilmek için siteye girdiğimizde ana sayfada bulunan “**download**” düğmesinden kütüphaneyi bilgisayarımıza indirebiliriz.

Yada bu kütüphanelerin linklerini sayfamıza ekleyerek direk olarak kütüphaneyi kullanabiliriz. Bunun için öncelikle ana sayfadaki “**Get Started**” düğmesine tıklayalım. Açılan sayfada sağ üst köşede o gün için en son geliştirilmiş olan versiyonu görebiliriz. Bu kütüphane sürekli olarak geliştirilmektedir. Dolayısı ile zaman içinde daha gelişmiş kütüphaneleri kullanma imkanı da doğacaktır. Bu sayfanın biraz aşağısında sayfamıza ekleyeceğimiz CSS ve JS linklerimiz bulunmaktadır.

Buradan Css linkini kopyalayıp alalım ve sayfamızın üst kısmına <head> içerisine ekleyelim.

```
<link href="https://cdn.jsdelivr.net/npm/bootstrap@5.0.0-beta3/dist/css/bootstrap.min.css" rel="stylesheet" integrity="sha384-eOJMYsd53ii+scO/bJGfSiCZc+5NDVN2yr8+0RDqr0Ql0h+rP48ckxlpbzKgwra6" crossorigin="anonymous">
```

Benzer şekilde biraz daha aşağıdan Bundle (paket) başlığı altındaki JS dosyalarımızı da alalım. Bunları da sayfanın en alt kısmına </body> etiketinden önce ekleyelim. Hemen biraz daha alta “Seperate” (ayrı) başlığı ile linkleri paket olarak değil ihtiyaca göre istediğimizi de ekleyebiliriz.

```
<script src="https://cdn.jsdelivr.net/npm/bootstrap@5.0.0-beta3/dist/js/bootstrap.bundle.min.js" integrity="sha384-JEW9xMcG8R+pH31jmWH6WWP0WintQrMb4s7ZOdauHnUtxwoG2v15DkLts3qM9Ekf" crossorigin="anonymous"></script>
